- Presentations found on the internet;
- Books;
- Web sites;
- ...

# Outline

1 Configure Android device for debug

# Configure Android device for debug

## Configuration Overview

- In a nutshell to use a real device for test implies the following:
  - Have a Android device and a USB data cable!
  - Activate developer options on the Android device.
  - Activate debugging option on the Android device.
  - Connect Android device to the computer thought the usb data cable.
  - Install adb driver for your device.
  - Test your applications

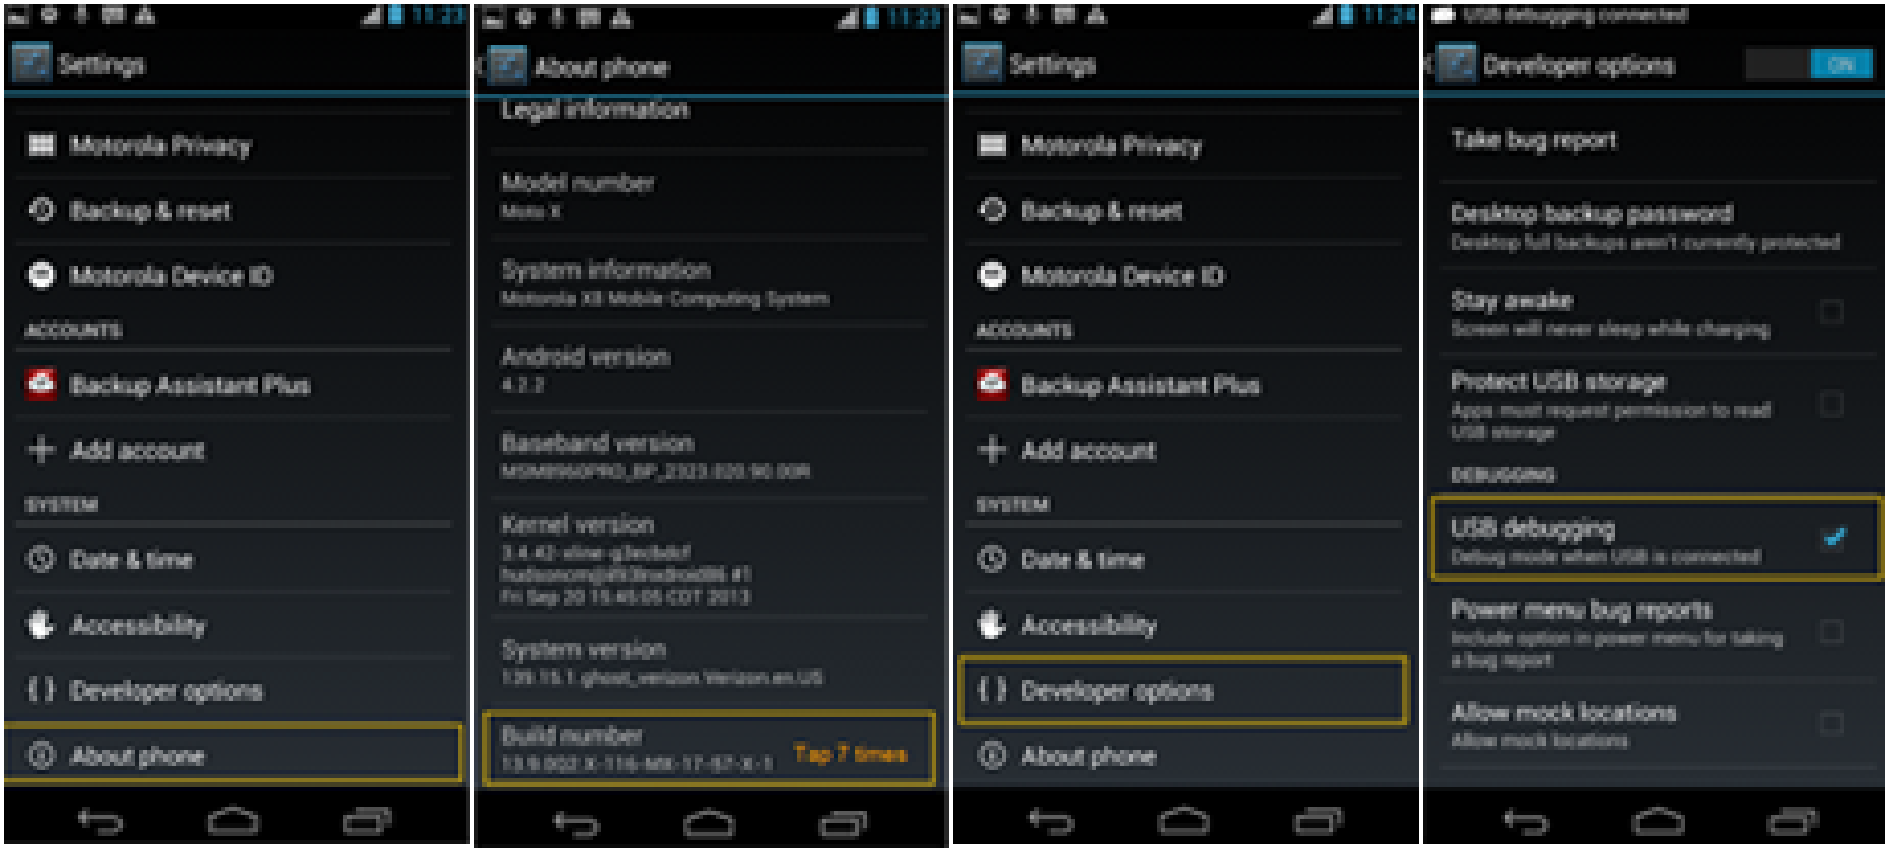

**Disclaimer**

This is a simple version of:
`https://developer.android.com/studio/run/device.html`

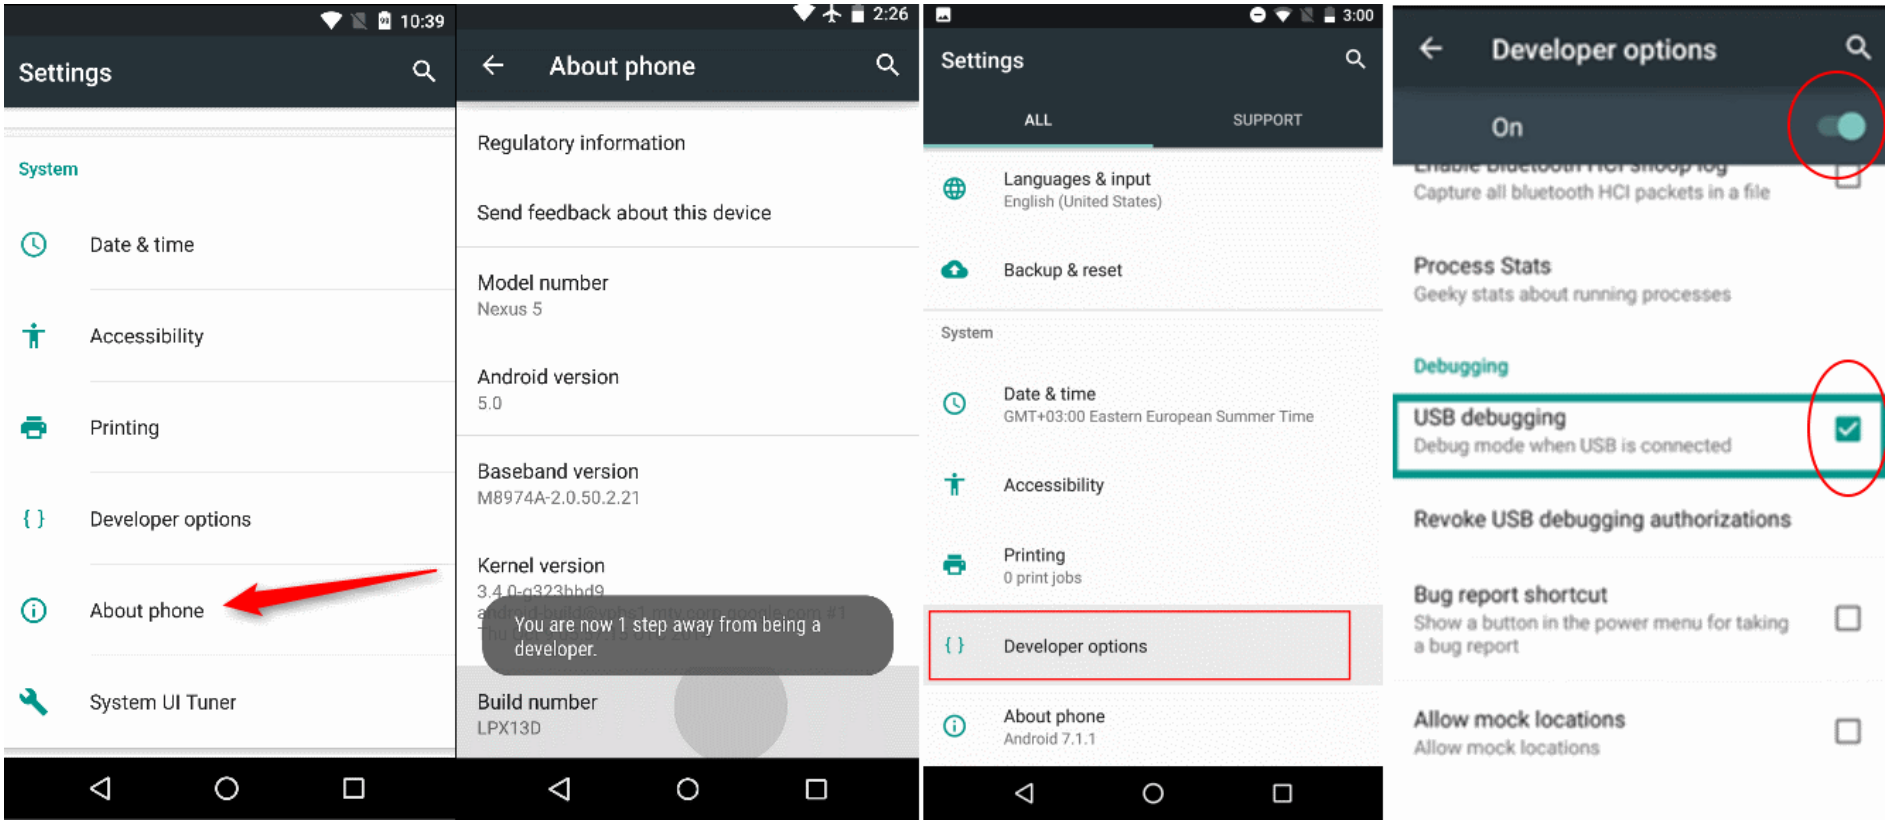

## Enable developer options

- On **Android 4.1 and lower**, the Developer options screen **is available by default**.
- On **Android 4.2 and higher**, you must enable this screen as follows:
  - Open the Settings app.
  - Scroll to the bottom and select About phone.
  - Scroll to the bottom and tap Build number 7 times.
  - Return to the previous screen to find Developer options near the bottom.

# Enable developer options (2) - Android 4

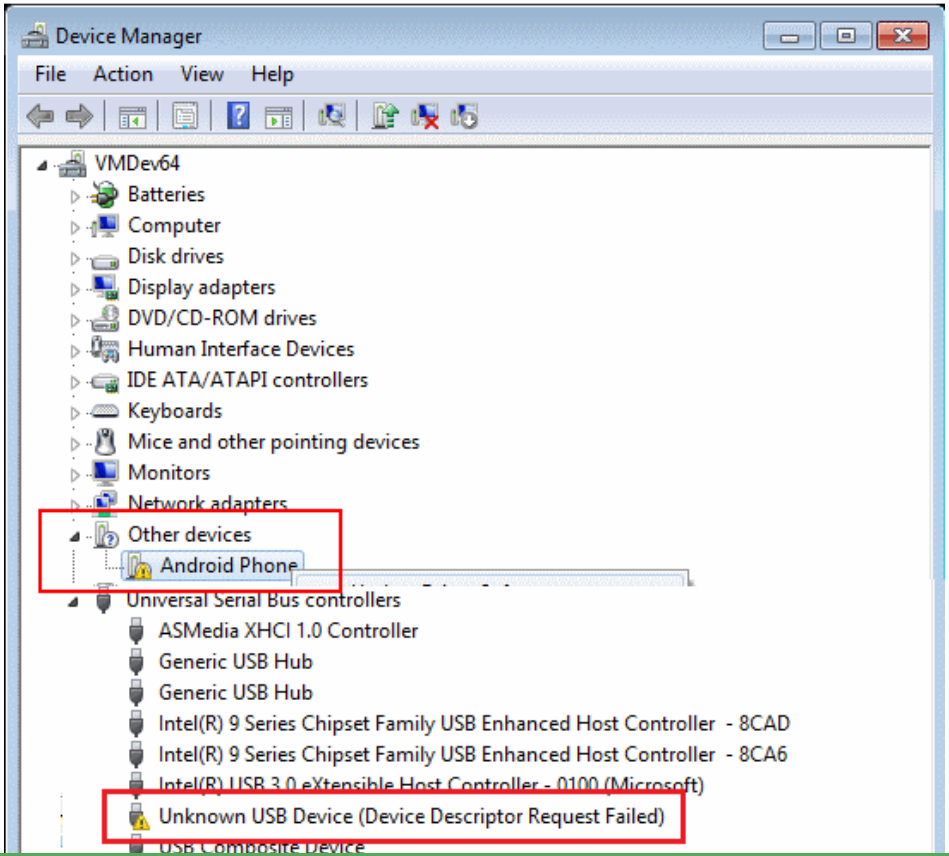

# Enable developer options (2) - Android > 5

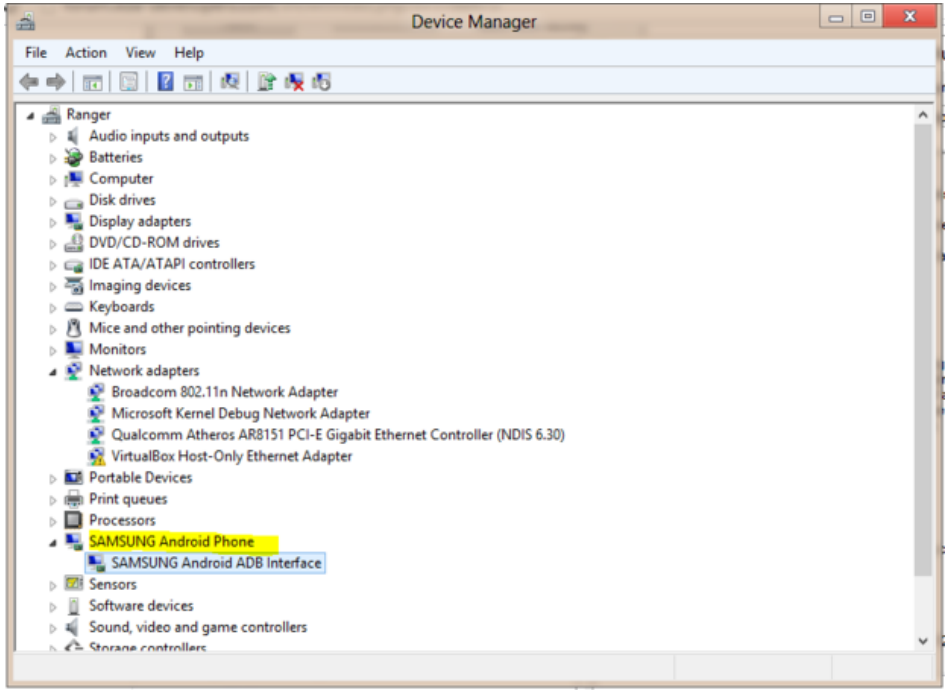

# Connect your device to PC

- Connect your Android device to your computer's USB port.
- Right click on windows logo and open Device manager.
- One of two things can happen:

*Your device is not recognized:*

*Or your device is recognized!*

*In this case you are ready too go!*

# Install adb driver for your device in windows

- First, find the appropriate driver for your device from the **OEM drivers table** available in:

  `https://developer.android.com/studio/run/oem-usb.html#Drivers`

- Once **you've downloaded** your USB driver, install it or extract it if it is a zip.
- Then follow the following instructions to install or upgrade the driver on Windows 10.

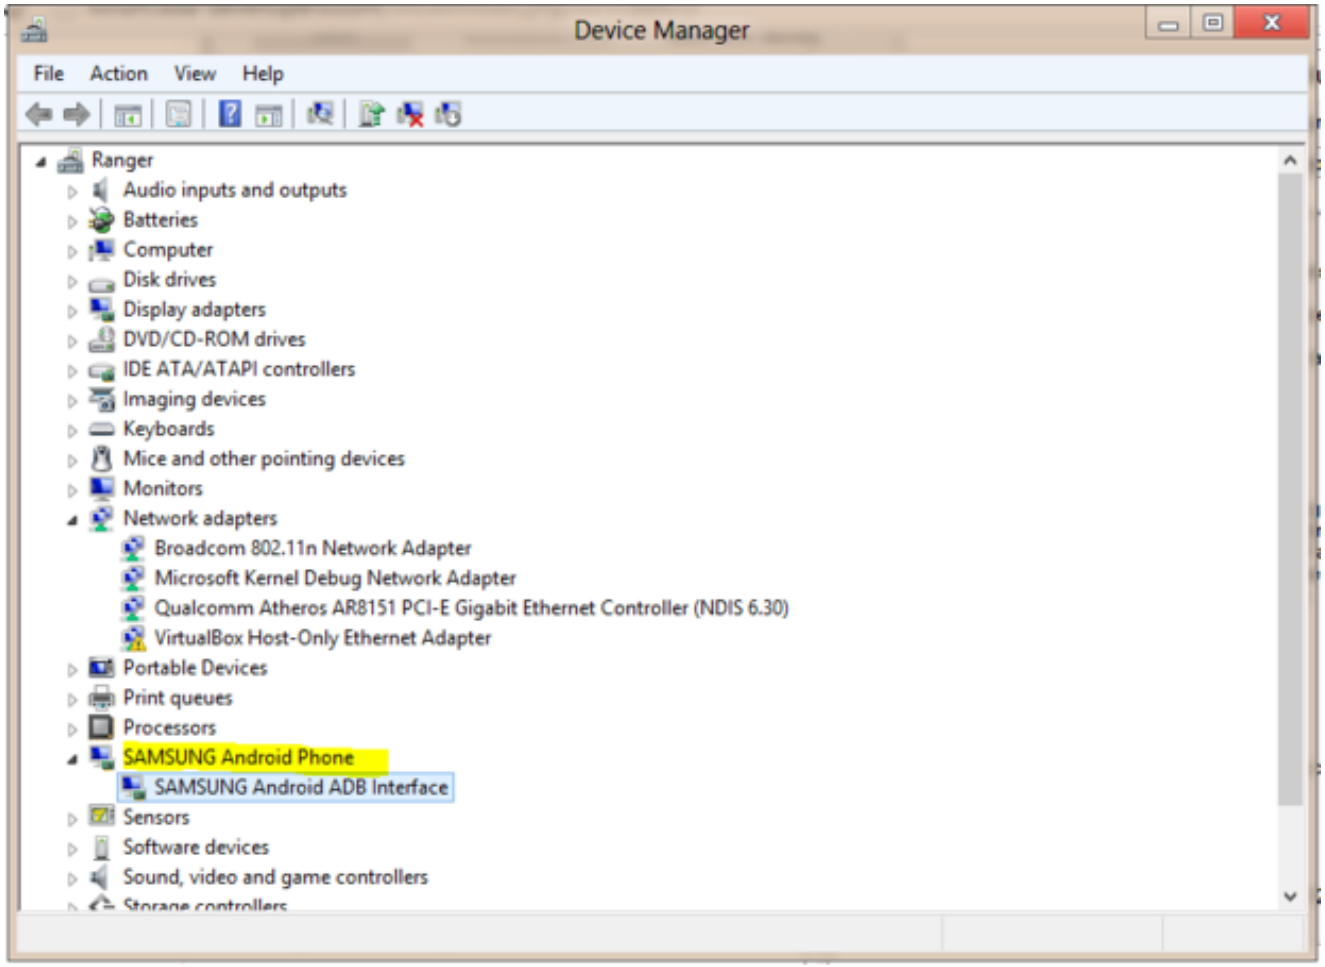

# Install adb driver for your device in windows (2)

- Connect your Android device to your computer's USB port.
- Right click on windows logo and open **Device manager**.
- In the Device Manager right pane, locate and expand Portable Devices.
- In Portable Devices, right-click the name of the device you connected, and then select Update Driver Software.
- If your driver has an installation try the automatic way.
- If not, then in the Hardware Update wizard, select "Browse my computer for driver software" and click Next.
- Click Browse and then locate the USB driver folder where you extracted or installed the drivers.

  For example, the Google USB Driver is located in `android_sdk/extras/google/usb_driver/` .
- Click Next to install the driver.

# Install adb driver for your device in windows (3)

- After that you should have something look like this:

*In this case you are ready too go!*
